

Aftermarket

**Your  
Partner  
in Hydraulics**

## Global after-sales service and distribution

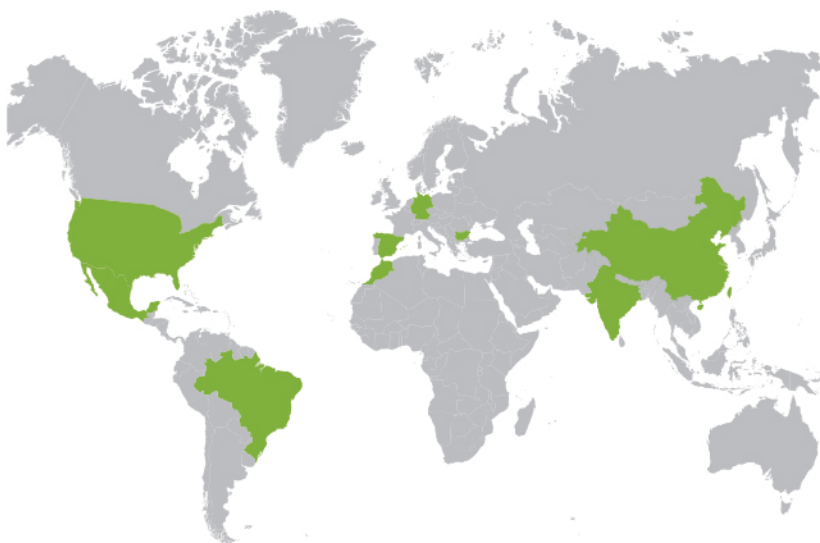

Glual makes a decisive contribution to extending the productive life of renewable electricity generation facilities. Our exclusive aftermarket service provides our clients with a wide range of top-quality spare parts and the knowledge and know-how of our experts. All this guarantees the highest operation level for hydraulic systems throughout their useful life.

We have nine production centres of the highest competitiveness in manufacturing and service - Spain, Germany, Bulgaria, Morocco, India, China, U.S.A and Brazil - as well as more than 400 highly qualified and experienced professionals in the industry, allowing us to work alongside our customers, responding to all their requirements with diligence.

At Glual we provide an efficient and reliable pre-sales, sales and aftermarket service, generating value and commitment to our clients.

## Hydraulic Solutions Worldwide

More than 50 years of experience in the hydraulics sector have made us a global company with the knowledge and know-how necessary to accompany our clients in all their innovation challenges and market needs. This has allowed us to create solid and trustworthy alliances with our clients.

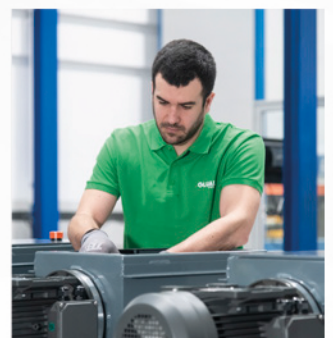

# Technical Support

01.

## SPARE PARTS AND CONSUMABLES

We offer consumables, components and hydraulic systems necessary to guarantee the useful life of the machines at full capacity. We have a highly qualified technical team with extensive experience to offer our clients solutions adapted to any need. We hold a large stock of our products as well as those of the leading brands, to guarantee our clients a suitable spare part in a short delivery time and at a competitive cost: cylinders, accumulators, rotary joints, blocks, valves, pumps, filtration systems and other auxiliary elements.

More than 50 years devoted to the manufacture of hydraulic components and systems

Our technical support reinforces the sale of spare parts and the repair/refurbishing of items, thus ensuring customer satisfaction. A team of experts available allows the client to identify and implement the solution that best suits their needs.

02.

## REPAIRS REFURBISHMENT

At Glual we want to be part of the transition to a circular economy, and we understand that repair is an opportunity to extend the useful life of a product. Therefore, we refurbish hydraulic components and equipment following the same quality and cleanliness criteria used in the mass production process, which allows us to offer the same guarantee as a new product. In addition, we always apply state-of-the-art improvements that allow us to even upgrade the performance of the repaired product compared to the new one.

03.

## REENGINEERING

Our R&D team develops and designs upgrades, improvements, and retrofits to extend the service life of hydraulic equipment, improve its performance, eliminate recurring breakdowns, and facilitate maintenance. By applying reverse engineering, we work not only on equipment and systems manufactured by Glual, but also by third parties. We have a particular prototype assembly area and test and validation benches, ensuring 100% reliable solutions for our clients.

## Highest quality components tailored to the client's needs

We work together with world-leading, high-quality component manufacturers in their respective sectors.
